### **Midterm Project**

I faced some challenges while working on the project. I struggled to start on time and had to rush to complete it within a short amount of time. However, I was able to overcome the challenges faced by looking over our old projects and comparing them if something wasn't working. The biggest challenge was deploying the project to Heroku since I had never done that before. After watching the video and reading all the text on blackboard, I was able to figure it out. I probably spent the most time thinking about how I was going to implement the admin side of the project. At first, I tried adding an admin page to the same folder as the main homepage but after a while, I figured it would be better to create a whole different folder for admin-related pages. The CSS code was scavenged from all over the internet and adjusted to my liking.

Overall, this project was a great learning experience for me. It taught me how to overcome challenges and how to think creatively when solving problems. I also learned how to deploy a project to Heroku and how to implement an admin site. These are valuable skills that will definitely help me in my future projects.
